

MORE POSSIBILITIES

Exo is a brand that supplies top-quality products for the cosmetology and podiatry sectors. It is characterised by exceptional attention to the development of its product range, with a focus on meeting customer needs. Professional equipment and accessories, including nail drills, significantly enhance working comfort thanks to their high-quality construction.

EXO SYNTRA NAIL DRILL

Functional solutions for smooth operation and a tidy workstation.

Nail styling drill

The versatile **Exo Syntra nail drill** supports the efficient performance of manicures – from preparing the cuticles and nail plate to removing residues from previous treatments. **The adjustable speed control makes it easy to** adapt the machine to the treatment being carried out, ensuring comfort during each stage of the manicure. The well-thought-out design and functional features **help maintain a smooth workflow** and keep the workstation better organised.

TWIST-LOCK SYSTEM

Quick, intuitive cutter changes for smooth and precise operation.

Secure the drill bit before starting work.

Twist-Lock head

The slim, contoured handle is ideal for technicians with small hands, ensuring a secure and comfortable grip. The built-in **Twist-Lock system** allows for quick, intuitive bit changes, which translates into smooth and precise operation. Ventilation holes improve airflow, **helping to reduce overheating of the head**. The flexible coiled cable ensures high comfort during use, reaching **over 150 cm in length** when fully extended.

CONTROL PANEL WITH DISPLAY

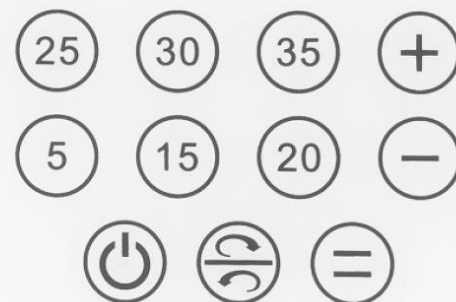

Easy adjustment of rotational speed up to 35,000 RPM.

Simple and intuitive operation

The **control panel with display** allows you to easily adjust the rotational speed to suit the type of treatment being performed. You can select one of the following values: **5, 15, 20, 25, 30 or 35 thousand revolutions per minute**, or adjust the speed continuously using the **'+' and '-' buttons in increments of 1,000 revolutions per minute**. This allows you to quickly set the required speed or precisely adjust it to the current stage of the procedure.

SMOOTH DIRECTION CHANGE

The router decelerates and stops the cutter before reversing direction.

Smooth change of rotation direction

Changing the direction of rotation does not require manually stopping the machine. The router **automatically decelerates** and stops the cutter before it begins rotating in the opposite direction, **thereby reducing the load on the motor and drive mechanism**. The '=' pause button, meanwhile, allows you to stop the machine at any time.

SIDE HEAD HOLDER

Conveniently rest the head at your chosen angle – safely and within easy reach.

Practical workstation organization

Whilst working, the head can be conveniently hung **on a side bracket**, the position of which can be adjusted to suit your needs by setting it at the desired angle. This ensures the head is safely stowed away and **the workstation is better organised**. The housing also features **a compartment for cutters**, allowing you to store your most frequently used tools in an orderly manner and keep them within easy reach at all times. The set also includes **basic diamond bits** for shaping cuticles and the nail plate, as well as for working with gel and acrylic, plus a holder with an abrasive pad – practical accessories for everyday manicures.

COMPACT, STABLE BASE

The small, minimalist base fits into a variety of workstation layouts.

Stability and comfort

The classic white colour scheme and **minimalist finish** mean that the manicure drill blends in well with a variety of salon set-ups. **The compact base** takes up very little space, making it easier to organise your workspace. The durable plastic casing is **aesthetically pleasing and easy to keep clean**. The stable, well-balanced design and **non-slip elements** on the base ensure the drill remains securely in place during use, even with intensive use.
