

The **GLOW brand** is professional lighting that improves the performance of services both in beauty salons and medical offices. It offers a wide range of specialized lamps, including UV and treatment lamps, necessary for precise work.

GLOW

effective solutions for nail stylists

A practical way to beautiful nails

Nail lamp Glow F2 is a device equipped with practical functions, allowing you to effectively perform manicure and pedicure treatments using hybrid polishes, gels or other light-curing preparations. **Evenly spaced LEDs and the innovative Dual LED technology** used guarantee perfect fixation of nail styling. Unique design, ease of use and well-thought-out functionalities make the lamp perfect for both professional and home use.

dual led technology

*evenly
distributed
LEDs allow for
adequate curing manicure*

Shadowless device with Dual LED technology

It is equipped with as many as **57 properly arranged LEDs** (without the so-called “dead zone”) with a **total power of 220 W**, ensuring perfect curing of gels and hybrid polishes. The Glow F2 model has a closed shape, **the so-called booth**, which allows for even and precise curing of nail styling. **The Dual Led technology** used in this device makes the diodes emit light of two wavelengths, **not tiring the eyes and providing a wide spectrum of operation**. Thanks to the solutions used, **the lamp quickly and properly cures** even the most demanding products, also reaching the most inaccessible places on the nail plate.

display with timer

allows you
to set one of three
operating times: 30 s, 60 s
and 99 s (Low Heat Mode)

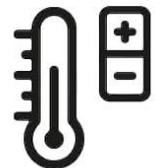

Adjustment of working time to individual needs

The lamp is equipped with a **timer with four programmed working times**: 10 s, 30 s, 60 s and 99 s (the so-called “Low Heat Mode”), which is counted down on the digital display. In addition, if no mode is selected, **the built-in motion sensor** will automatically start the lamp after placing fingers or foot under it, **assuming a maximum exposure time of 120 s**. The display will then show the curing time. This allows you to **conveniently select the length of exposure** to suit the styling performed at a given moment and the products used.

low heat mode

the device gradually
increases its power, eliminating
the burning sensation

Optimal “Low Heat Mode”

No more unpleasant burning while curing nail art! The already mentioned “**Low Heat Mode**” system means that during the curing of the nail products, **the device gradually increases its power**, thus heating up slower. This prevents you from feeling of heat during exposure. This is **an irreplaceable function, especially when curing gels**, which often causes discomfort when using other lamps available on the market.

ergonomic bottom panel

*removable bottom
facilitates pedicure
treatments and will be
useful for cleaning the device*

Possibility to disconnect the bottom panel

The device has an **easy-to-disassemble removable bottom panel**, which in the case of pedicure or podiatry treatments, **significantly facilitates placing the foot under the lamp**. This option is also **perfect for cleaning or disinfecting device**. A silver-tone handle with a polished finish is a **visually appealing addition** that will make it easier to move the device and will work well for mobile stylists. There is also an indentation on the case that can be used as a **phone stand**. It allows you to make the duration of the treatment more enjoyable with your favourite movie.

Unique, functional device

Useful functions, ergonomic shape and unique design with a mirrored metallic gradient finish in shades of pink and gold make **the lamp a practical and at the same time extremely tasteful element of beauty salon equipment**. Appropriate dimensions allow for **comfortable positioning of the entire hand or foot under the lamp**, which ensures even curing of the styling.
