

The **GLOW brand** is professional lighting that improves the performance of services both in beauty salons and medical offices. It offers a wide range of specialized lamps, including UV and treatment lamps, necessary for precise work.

GLOW

effective solutions for nail stylists

A practical manicure fixing lamp

The **GLOW V1 nail lamp**, equipped with useful functions, facilitates the performance of manicure and pedicure treatments, during which hybrid polishes, gels or other light-curing preparations are used. **Properly placed diodes and the Dual LED technology** used make the lamp guarantee perfect fixation of nail styling. The simplicity of operation makes it perfect for both professional and home use.

dual led technology

—
*evenly
distributed
LEDs allow for
adequate curing manicure*

Shadowless device with Dual LED technology

The lamp is characterized by a **power of 168 W**, which consists of as many as **42 properly arranged LEDs** (without the so-called “dead zone”), which ensure perfect curing of gels and hybrid varnishes. The V1 model has a closed shape, **the so-called booth**, which allows for more accurate and even curing of nail styling. **The Dual LED technology** used results in the fact that the diodes emit light of two wavelengths, not tiring the eyes, providing a **wide spectrum of action and quick fixation of the styling**. The solutions used make the lamp properly cure even the most demanding nail polishes, reaching the most inaccessible areas on the nail plate.

display with timer

—
*allows you
to set one of three
operating times: 30 s, 60 s
and 99 s (Low Heat Mode)*

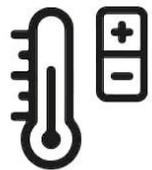

Adjusting working time to individual needs

The lamp timer has **four preset operating times**: 10 s, 30 s, 60 s and 99 s (the so-called “Low Heat Mode”). In addition, if no mode is selected, the built-in motion sensor automatically starts the lamp after placing fingers or foot under it, assuming a **maximum exposure time of 120 s**. The display counts down the curing time – regardless of the selected mode. This allows you to **conveniently select the length of exposure** to suit the styling you are doing at the moment.

low heat mode

*the device gradually
increases its power, eliminating
the burning sensation*

Comfortable “Low Heat Mode”

The already mentioned **“Low Heat Mode” system** makes the lamp to **gradually increase its power during curing**, thus heating up more slowly. This prevents the feeling of burning or heat during exposure. This is an **irreplaceable function, especially when curing gels**, which often causes discomfort when using other lamps available on the market.

ergonomic bottom panel

*removable bottom
facilitates pedicure
treatments and will be
useful for cleaning the device*

Detachable bottom panel for a comfortable pedicure

In addition, the lamp has an **easy-to-disassemble removable bottom panel**, which greatly improves the performance of pedicure or podiatry treatments, making it **easier to place the foot** under the device. This option will also work perfectly while cleaning or disinfecting the device.

Elegant design and functionality

Useful functions, ergonomic shape and classic color scheme make the lamp a practical and at the same time aesthetic element of beauty salon equipment. The dark interior and a colorful insert in the form of a circle with a polished finish in shades of blue give the device a **stylish character**. The appropriate size allows for placing the entire hand or foot under the lamp, which ensures **even curing of the styling**.
