

The **GLOW brand** is professional lighting that improves the performance of services both in beauty salons and medical offices. It offers a wide range of specialized lamps, including UV and treatment lamps, necessary for precise work.

GLOW

effective solutions for nail stylists

Practical manicure fixation lamp

The **GLOW nail lamp** is a device equipped with a number of useful functions to **facilitate the performance of manicure and pedicure treatments**, during which hybrid varnishes, gels or other light-curing preparations are used. Thanks to the appropriately placed LEDs and Dual Led technology used, the lamp guarantees **excellent fixation of nail design**. The simplicity of use and thoughtful design make it perfect for both professional and home use.

dual led technology

—
*evenly
distributed
LEDs allow for
adequate curing manicure*

Shadowless device with Dual Led technology

Equipped with **36 appropriately placed LEDs** (without the so-called "dead zone"), it provides perfect curing of gels and hybrid varnishes. This model relies on a **closed shape, the so-called booth**, which allows for more accurate and faster curing of nail designs. **The Dual Led technology** used makes the diodes emit light of two wavelengths, not tiring the eyes and providing a wide spectrum of operation. Thanks to the solutions used, the lamp **correctly cures even the most demanding nail polishes**, reaching even the most inaccessible places on the nail plate.

display with timer

—

*allows you
to set one of three
operating times: 30 s, 60 s
and 99 s (Low Heat Mode)*

Adjustment of working time to individual needs

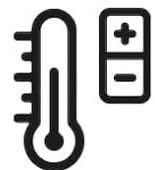

The lamp is equipped with a **timer with four programmed working times**: 10 s, 30 s, 60 s and 99 s (the so-called "Low Heat Mode"), which are counted down on **the digital display**. In addition, if no mode is selected, **the built-in motion sensor** will automatically start the lamp when you put your fingers or toes under it, assuming a **maximum exposure time of 120 s**. The display will then show the curing time. This allows you to conveniently select the length of exposure to suit the styling you are doing at the moment.

Comfortable "Low Heat Mode"

The already mentioned **"Low Heat Mode" system** makes the lamp gradually increase its power during curing of the styling, thus **heating up slower**. This **prevents the feeling of burning** or heat during exposure. This feature is indispensable, especially when curing gels, which often causes discomfort when using other lamps available on the market.

*the device gradually
increases its power, eliminating
the burning sensation*

Detachable bottom panel and decorative handle

It has an **easily removable bottom panel**, which makes it extremely easy to place the foot under it for pedicure or podiatry treatments. This option will also work great for cleaning or disinfecting the device. **The handle in silver tones** with a polished finish is a **visually appealing addition** that will make it easier to move the device around and will

be perfect for mobile stylists. There is also a hollow on the case that can be used as a **phone stand**. It allows you to make the treatment time more enjoyable with your favorite movie.

Elegant design and functionality

Useful functions, ergonomic shape and a classic color scheme with a colorful insert in the form of a handle in shades of silver make the lamp a **practical and at the same time tasteful** piece of salon equipment. The appropriate size allows to place the entire hand or foot under the lamp, which **ensures even curing of styling** and reduces the risk of allergies.
