Wax heater with display

Professional wax heater for skin epilation, in a unique design. The heater is safe and easy to use. It allows for efficient adjustment of the wax temperature visible on the display. Includes easy-to-pull aluminium bucket.

digital display

*Temperature adjustable
from 30 to 120 °C*

Its features are:

- Transparent cover to control wax melting and prevent overheating and dust accumulation.
- Temperature ranging from 35° up to 120°C adjustable with a knob.
- Digital display.
- The control diode and the click system (click when moving the knob to indicate that the device is on / off; overload protection).
- Suitable for regular wax, pearls, blocks and paraffin wax.

wax heating

*For heating the wax
in pearls, cans and cubes*

How to use?

1. Put the wax beads or canned wax into the warmer. Then connect the device to electricity.
2. Turn the knob to ON; the red light shows that the device has started working.
3. While the appliance is operating, the light will turn off and on again to keep the wax temperature constant.
4. The wax takes 10 to 30 minutes to dissolve, depending on the temperature selected.
5. Always check the temperature of the wax before applying it to the skin to avoid burns
6. After finishing work, turn off the device and wait until it cools down.
7. The device can be cleaned when disconnected from the power supply.

Technical data:

Model: AX900

Voltage: 220V / 240V

Electric power: 100W

Frequency: 50 / 60Hz
