MORE POSSIBILITIES

Exo is a brand that supplies top-quality products for the beauty and podiatry sectors. It is characterized by exceptional attention to the development of its product range, with a focus on meeting customer needs. Professional equipment and accessories, including nail drills, significantly enhance working comfort thanks to their high-quality construction.

WSZECHSTRONNA FREZARKA EXO FUTURA

Sprawne i precyzyjne przygotowanie paznokci do dalszych etapów zabiegu.

A versatile nail styling drill

The **Exo Futura nail drill** has been designed to facilitate the efficient performance of manicures and pedicures, both when preparing the natural nail plate and when removing residues from previous treatments. It allows you to **precisely prepare the nails for the next stages of the treatment**, shape the cuticles and work with gel or acrylic. **Speed control and the ability to change the direction of rotation** enhance user comfort, **helping you maintain control over the drill and** move smoothly between the various stages of a manicure or pedicure.

Twist-Lock head

The ergonomically contoured drill head has a tapered grip, ensuring it sits comfortably in the hand and **allows for easy manoeuvring of the drill**, even for those with smaller hands. The set includes **a rubberized grip** that can be fitted to the head to improve grip stability and prevent it from slipping whilst in use. **The Twist-Lock system** allows for quick bit changes without the need for additional tools, efficiently preparing the drill for the next stages of manicure and pedicure. **The flexible coiled cable ensures** freedom of movement during treatment and extends to **over 160 cm in length**.

Smooth adjustment and clear display

The drill is fitted with **a dial featuring a built-in digital display**, which allows for smooth adjustment of the rotational speed within a range **of up to 35,000 revolutions per minute**. Large, clear digits **make it easy to read the values** whilst working, ensuring convenient control over the machine's settings. **A switch** located on the side of the housing **allows you to change the direction of rotation** – remember to stop the milling machine before doing so. The display shows the selected direction of rotation, the method of controlling the machine – via the rotary knob or foot pedal – and whether the pause function is active.

Practical solutions for working comfort

The set includes **a potentiometric foot control**, which allows you to control the rotational speed by applying pressure with your foot. This leaves your hands free during the procedure, ensuring **greater freedom of movement** and comfort whilst working. A practical plastic holder allows the head to be hung up safely between styling stages. It can be mounted **on either side of the base and adjusted to the desired angle**, allowing you to adapt its position to suit your workspace layout. The housing also features **a compartment for cutters**, ensuring that your most frequently used accessories are kept organized and always to hand.

Set of nail styling bits

The nail drill comes with **a set of diamond bits**, allowing you to precisely shape cuticles, prepare the nail plate and work with gel and acrylic. Their variety makes it easy to adapt the tool to your current needs and move efficiently between the different stages of the nail styling process. The set also includes **a holder with an abrasive strap**, which is ideal for shaping and smoothing nails and removing excess material. The included accessories allow you to make the most of its potential for manicures and pedicures straight away.

Sturdy construction and easy to keep clean

The futuristic, streamlined casing in classic shades of white gives the drill an elegant look and ensures it blends in well with various manicure and pedicure station set-ups. The smooth surface of the casing **makes it easy to keep the device clean**. The stable, well-balanced design ensures the drill remains securely in place whilst in use, whilst **the non-slip pads on** the base further prevent it from sliding across the worktop. This ensures the device remains stable during use, **allowing for a comfortable and organized workspace**.
